

Sunnyview Bluestem
Andropogon gerardii 'Sunnyview'

Height: 5 feet

Spread: 24 inches

Sunlight:

Hardiness Zone: 2a

Description:

A lovely fine textured, upright spreading selection; beautiful when used as accent features in landscapes and garden beds; grassy foliage shows off reds and greens, changing to copper-bronze in the fall; low maintenance and easy to grow

Ornamental Features

Sunnyview Bluestem is primarily grown for its highly ornamental fruit. The coppery-bronze seed heads are carried on showy plumes displayed in abundance from late summer to early fall. Its attractive grassy leaves emerge brick red in spring, turning bluish-green in color with prominent antique red tips. The foliage often turns coppery-bronze in fall. The steel blue stems can be quite attractive.

Landscape Attributes

Sunnyview Bluestem is an herbaceous perennial grass with an upright spreading habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cut back to the ground in late winter before active growth resumes. It has no significant negative characteristics.

Sunnyview Bluestem is recommended for the following landscape applications;

- Vertical Accent
- Mass Planting
- General Garden Use

Planting & Growing

Sunnyview Bluestem will grow to be about 4 feet tall at maturity, with a spread of 24 inches. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
